Welcome to Shopfitting Solutions International

Shopfitting Solutions International is a specialist design and delivery business focused on creating modular, cost-effective retail environments that are efficient to manufacture, transport, and install. We combine strong retail design principles with smart construction methodologies to help clients achieve high-quality outcomes without the cost and complexity of traditional shopfitting.

Using cutting-edge design, documentation, and digital drafting technologies, we develop retail interiors as a series of coordinated modular components. These components are value-engineered, standardised where appropriate, and designed to be manufactured offshore, then imported as complete kits ready for streamlined on-site installation. This approach significantly reduces build time, labour requirements, and overall project risk.

We work across a broad range of retail sectors, partnering closely with retailers, builders, and developers to deliver interiors that are flexible, scalable, and repeatable across multiple locations. Whether for single stores or national roll-outs, our systems are designed to maintain design consistency while allowing for site-specific adaptation.

At every stage, we focus on practical design solutions that deliver commercial value—balancing aesthetics, durability, compliance, and cost. The result is retail spaces that are efficient to build, easy to install, and built to perform in real-world trading environments.

Our Process

Design sits at the core of our DNA. Every project begins with a structured and detailed briefing process that allows us to fully understand your brand, commercial objectives, budget parameters, and the functional requirements of the space. Through this collaborative briefing stage, we establish a clear design direction, confirm fit-out budgets, and identify key operational and compliance needs that will inform the project from the outset. With this foundation in place, we develop a range of design concepts aligned to the approved brief, presented using advanced 3D visualisation and rendering technology to clearly communicate intent, materials, lighting, and spatial relationships. Once a preferred design direction is selected, the project moves into a highly detailed drafting and documentation phase, where every component is precisely designed and documented to enable offshore manufacture. This level of detail allows us to generate accurate costings early, refine the design through value engineering, and optimise each element to achieve the best balance between cost, performance, and quality. All components are designed as integrated systems—incorporating signage, graphics, lighting, and services—so that on-site installation is fast, efficient, and predictable, ultimately reducing construction time, labour, and overall fit-out costs.

Our Clients

We work with a diverse range of clients including retailers, shopfitters, designers, and landlords, supporting projects across both single-site fit-outs and large-scale retail roll-outs. Our team has been involved in the design and production of hundreds of modular retail kits, spanning a wide variety of sectors such as jewellery, technology, gifts, newsagencies, telecommunications, food, medical, and specialty retail, among many others.

Whether our clients are delivering a one-off store or rolling out multiple locations nationally or internationally, we provide flexible support across key stages of the design and fit-out process. This can include early concept design, value engineering, detailed documentation, modular kit development, and coordination through manufacture and delivery.

Our team brings together qualifications in industrial design, interior design, and graphic design, combined with practical experience in construction, shopfitting, and international manufacturing and importing.

This unique mix of skills allows us to manage an integrated, end-to-end process—from initial design development, through offshore manufacture, to logistics, shipping, and the delivery of completed components ready for efficient on-site installation.

Our Goal

Our goal is to empower retailers, shopfitters, and designers to deliver exceptional retail environments without compromising on quality, finish, or commercial performance. We aim to create fit-outs that are sales-focused, customer-friendly, and operationally efficient, supporting both the brand experience and day-to-day retail use.

Through thoughtful design, smart modular systems, and careful material selection, we focus on delivering retail spaces that are not only visually strong but also durable and built to withstand the demands of real-world trading over time. By balancing aesthetics, functionality, and value, we help our clients achieve retail outcomes that perform today and remain relevant well into the future.

Let's Talk About Your Next Project

If you're planning to design or build a retail space, we'd love to hear about your next project. We offer a no-obligation design consultation, giving you the opportunity to explore how a modular retail kit or scalable roll-out solution could work for your space, budget, and timeline. Whether you're developing a single store or planning multiple locations, our team can help you identify smart, cost-effective design possibilities from the outset. To book your complimentary consultation, simply complete the contact form on our website and we'll be in touch.
